

COMP-118 Lab 0 - Exercise Answers

Exercise 3: Code Collaboration

a) Code Transfer Method

- Used GitHub repository for code sharing
- Created repo, pushed initial code with main() and one function
- Added collaborator to access the repository

b) Code Combination Process

- Other student implemented two functions and pushed changes
- I pulled their changes and implemented the final function
- Resolved any conflicts and tested the combined program

c) Self-Implementation

- Created two working directories to simulate multiple developers
- Implemented different functions in each environment
- Used Git pull/push to synchronize code between "developers"

Exercise 4: Testing

a) Distribution Method

- Shared GitHub repository link with tester
- Created a release version tagged as "v1.0-beta"
- Provided compilation instructions in README.md

b) Bug Reporting

- Used GitHub Issues for structured bug reporting
- Created issue template with steps to reproduce, expected vs. actual behavior
- Tracked status of bugs (open, in progress, fixed)

Exercise 5: Storage

a) Storage Solution

- Primary: GitHub repository
- Backup: Local Git repo + OneDrive backup

b) Version Naming

- Using semantic versioning: v1.2.3 (Major.Minor.Patch)
- Git branches: main (stable), dev (development), feature/xxx
- Tagged lab submissions: lab0-week1, lab0-final
